Script installation

- ❏ Download the pack from the store, *Your Products* tab.
- ❏ Copy the pack content into your server and unpack it in the app/Modules/ catalog.
- ❏ Start the module in the script's admin panel in the *Settings - Manage Modules* section

Manual

1. **Revenue Share** tab:

- Settings:

  - ❏ **Show historic revenue shares**, this option allows the users to see expired Revenue Shares packages on a list in the user panel.
  - ❏ **Upline activity requirement**, checking this option causes that income from the Revenue Share package will be added only to those users, who clicked on a certain number of advertisements during a previous day. This number is set in the Settings - Activity and security tab. If the user fails to fulfill this requirements, the bonus is not added to their account.
  - ❏ **Allow buying with purchase balance**, allows to buy packages from the Purchase Balance resources.

- Share log:
  Here you can see all active and inactive Revenue Share packages. We can see, who they belong to, and how much income it generated for a given user. You can remove single or multiple packages.

- Statistics is a diagram, where you can see your income, i.e. payments for packages, and costs, i.e. user bonuses for owed packages.

- Membership settings:

  - ❏ **Enable revenue share for this membership**, activates a possibility to purchase packages for a given membership.
  - ❏ **Where to credit revenue shares income**, selection of an account, where the income generated by the package will be added.
  - ❏ **Maximum amount of shares allowed**, maximum number of packages that can be owed. If the value -1 is put in this field it means that there is not limit.
  - ❏ **Maximum amount of shares allowed in one purchase**, the maximum number of packages that can be purchased in a single transaction. If the value -1 is put in this field it means that there is not limit.
  - ❏ **How many days between buying shares**, the number of days that must pass between purchase of another package. Value 0 means that no break is set.

- Membership settings - adding packages:

- ❏ **Name**, name of the package. It has an informative function; it will be visible to the user purchasing a package.
- ❏ **Running days**, the number of days that the package is valid for.
- ❏ **Max running days**, the maximum number of days that the package can be valid for. If this value is higher than Running days, it allows the user to "omit" a given number of days (resulting from the difference between these two values), if they do not meet the activity requirement on a given day (if the option is checked).
- ❏ **Pack price**, price of single package.
- ❏ **Overall return**, total return from the package after it becomes valid, expressed in percentage.
- ❏ **Credit revenue step**, the time, after which bonus from the package is to be awarded, the value expressed in minutes. However, remember that the minimum time value should be 10 minutes, because this is the interval according to which the cron job task is activated.
- ❏ **Items included in this pack**, these are ads packages ascribed to the user upon purchase of the Revenue Share package; hold the control or left command key to select more items.
- ❏ **Expected income**, is a projection of expected user income for a single package' here you can see the income value for a single step, during a day and during the whole period of the package.
